

EcoParse

Automated Species-Level Data Extraction Tool

Authors: Adam Ulicny, Florencia Grattarola, Gabriel Ortega, Ivo Kadlec, Petr Keil
 MOBI lab, Czech University of Life Sciences in Prague, e-mail: ulicny@fld.czu.cz

INTRODUCTION:

The Problem:

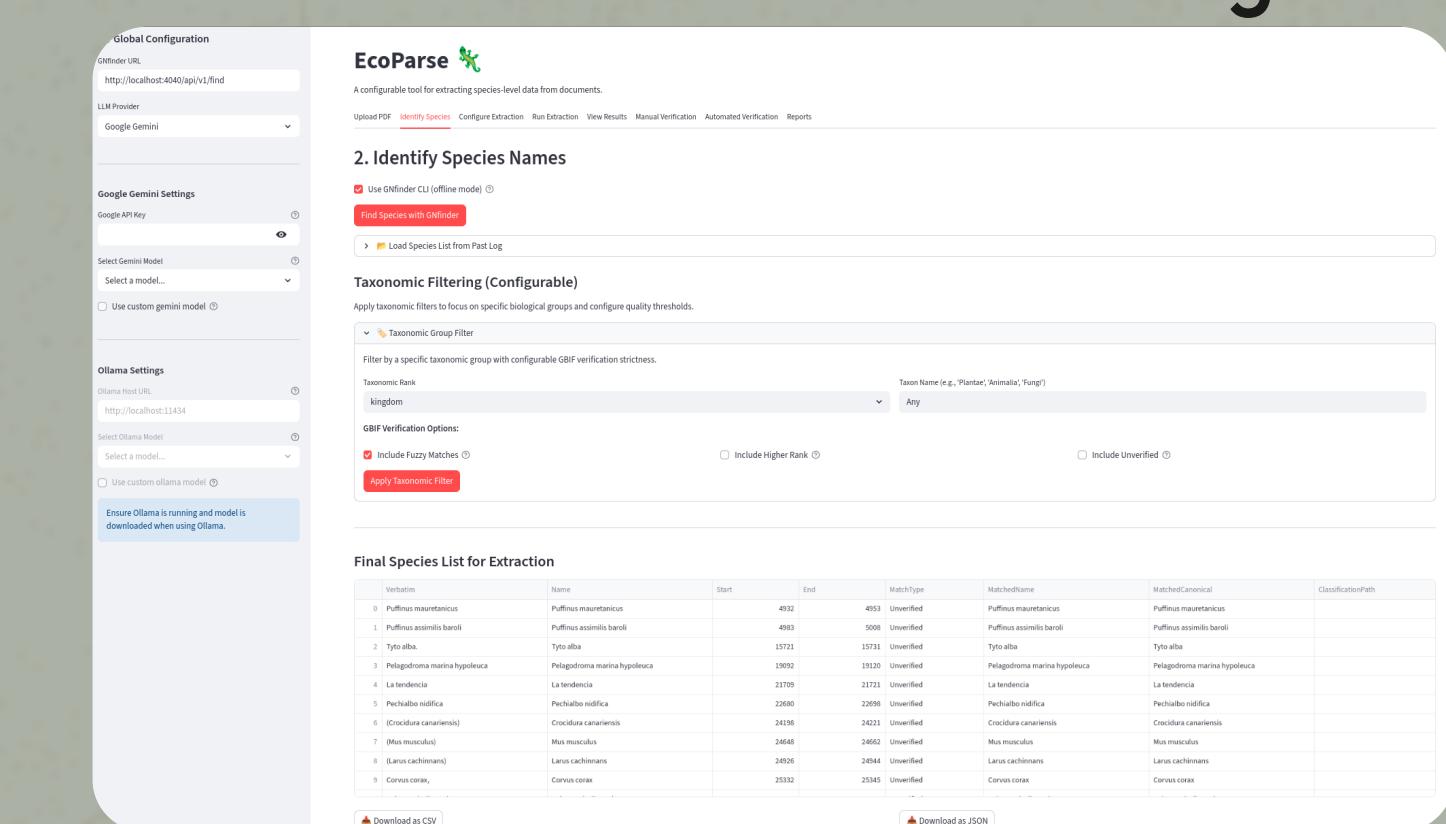

Valuable species-level data are often hidden in various sources.

For large-scale analyses, data must be extracted accurately and manually. This can take many human hours.

In our case:
 Thousands of Regional Redlists
 RegRed project

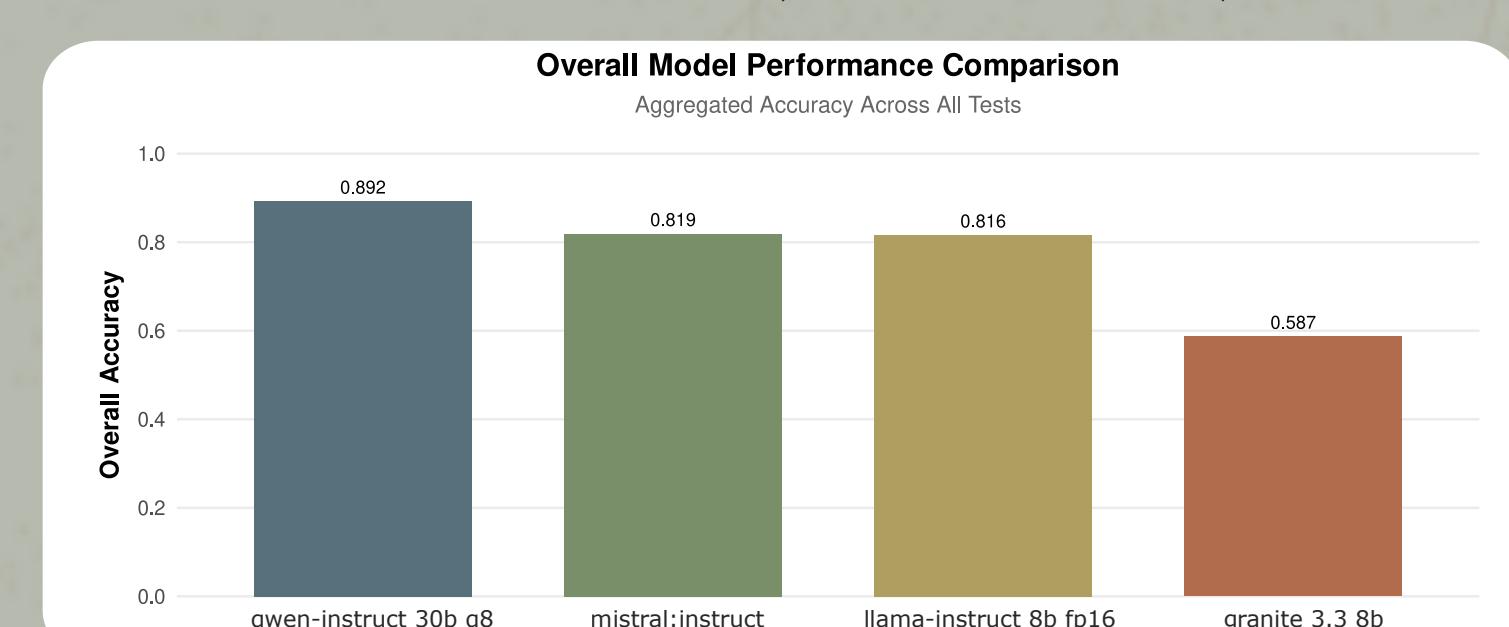

Our Solution:

A pipeline that combines NLP, strategic contextual chunking and existing LLM's into a GUI. Provided as a Docker image.

Accuracy:

We tested against 8 Redlists
 Compared 4 local models with identical settings between runs.
 20GB VRAM GPU (RX 7900XT)

Best performer = Qwen-instruct
 ~ 89 % mean accuracy

Try it out,
 contribute:

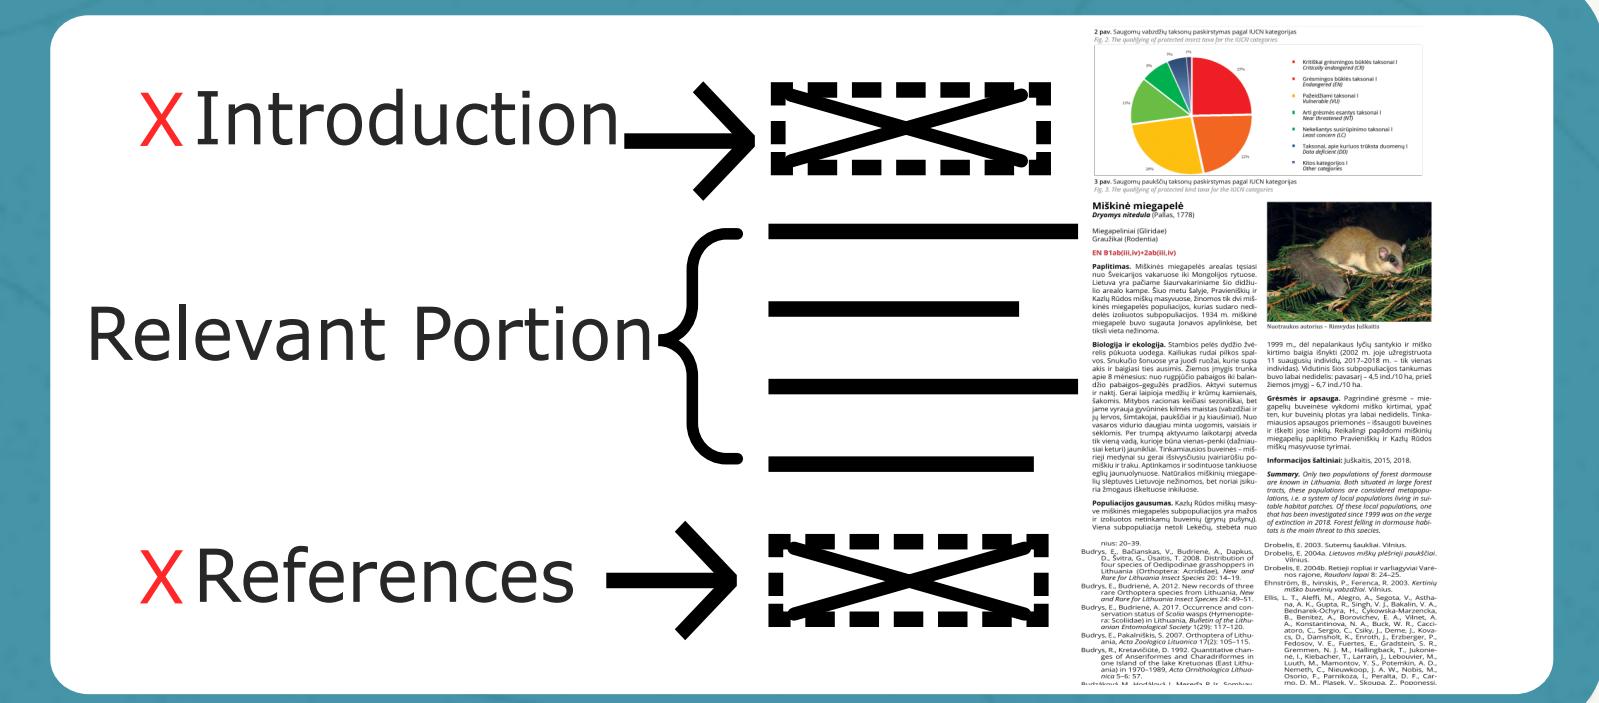

github.com/AdamUlicny/EcoParse

PIPELINE OVERVIEW:

File Preparation

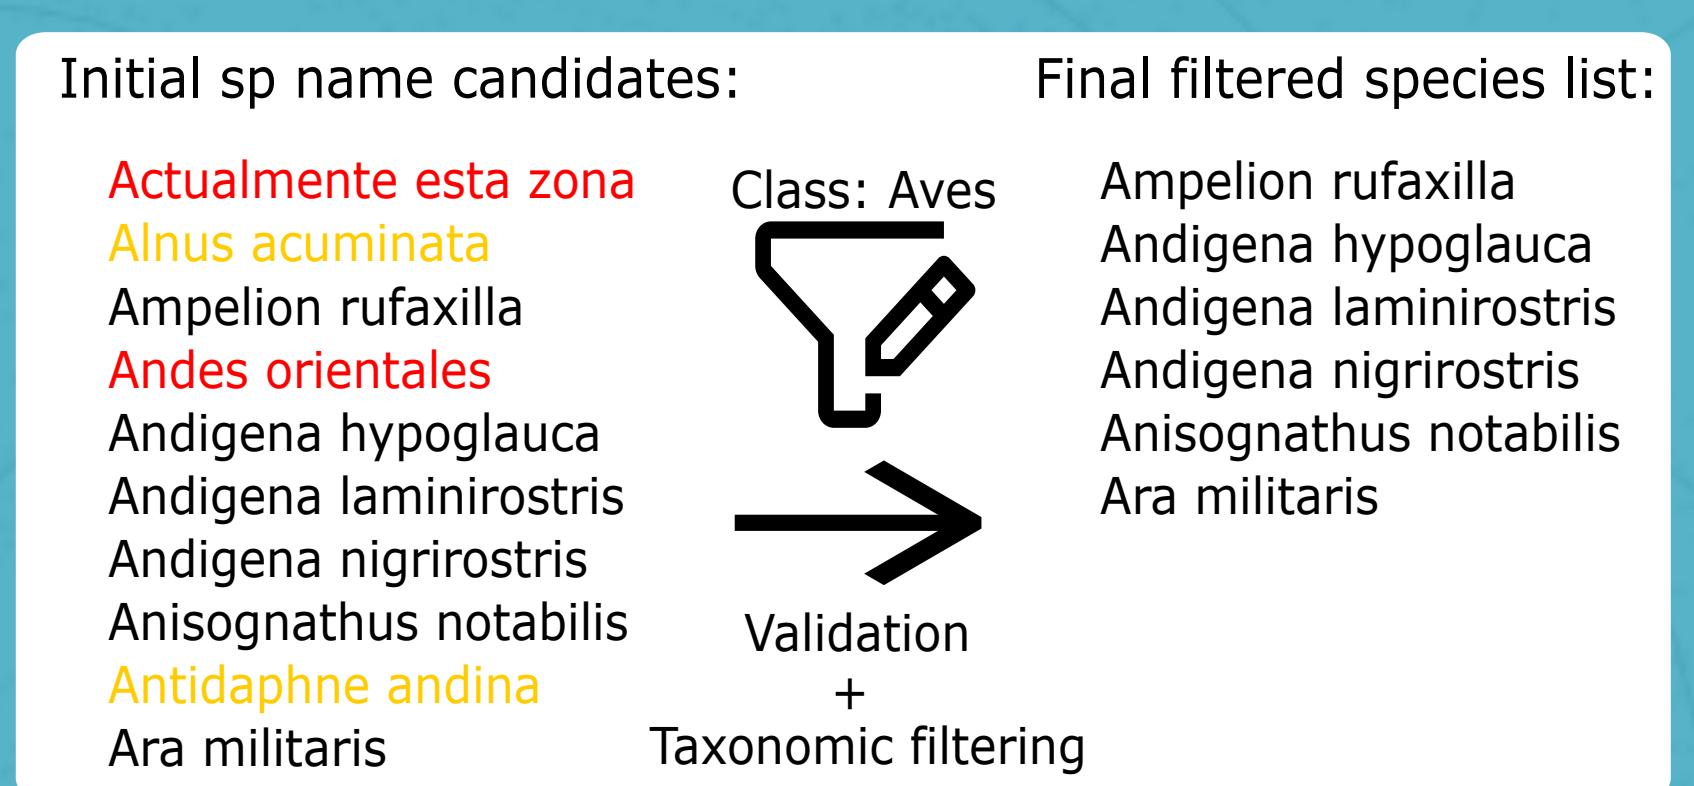

Trim irrelevant sections.
 This step focuses the extraction and reduces all API calls.
 Fewer FP's and tokens used.

Species names

GNFinder Locates potential latin names in text.

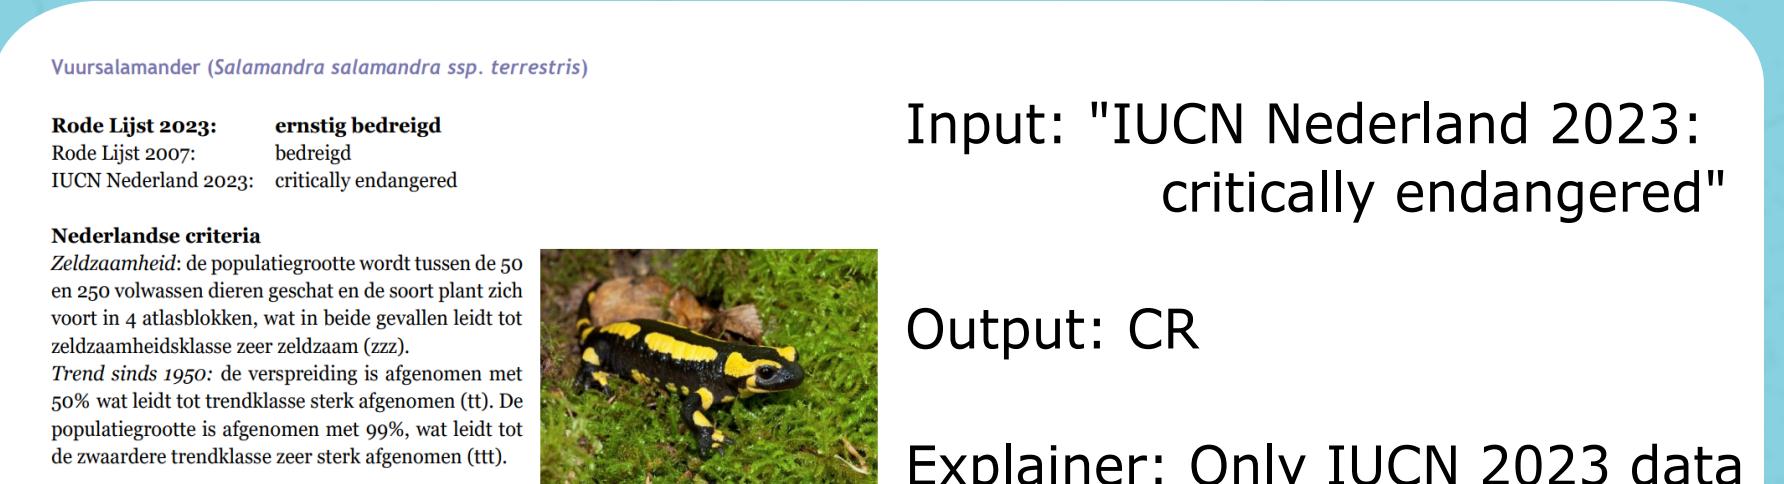

GBIF API filtering further focuses extraction on relevant taxons.

Examples

For better results, we guide the LLM by providing examples.

Few-shot prompting technique.

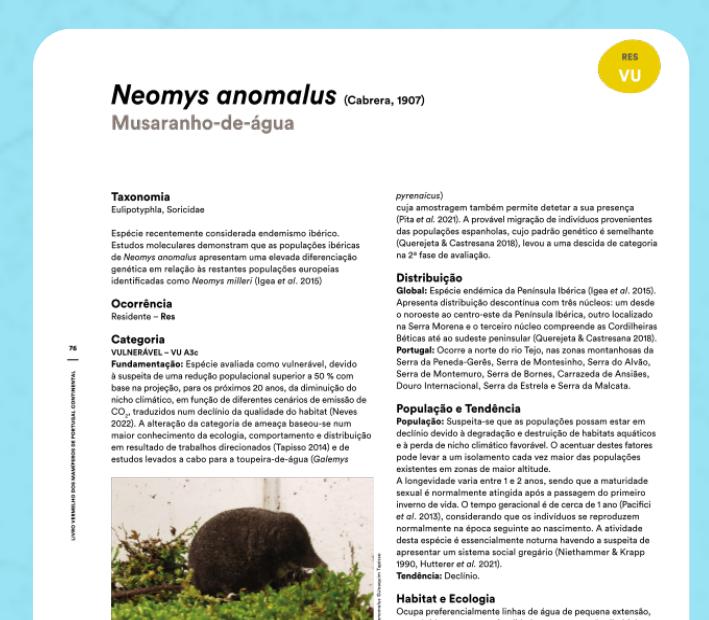

Chunking

For each species, contextual chunks are created.
 Text chunks are quicker and cheaper to process.
 Image preserves structure at a higher cost (tokens).

Text

<Pardela Chica
Puffinus assimilis baroli
 En Peligro; EN B2ab (i,ii,iii); C2a(ii)
 Autores: Domingo Trujillo y Juan José Ramos
 En el archipiélago canario está presente la subespecie P. a. baroli, habiéndose constatado su nidificación sólo en Alegranza, Montaña Clara>

Image

LLM parsing

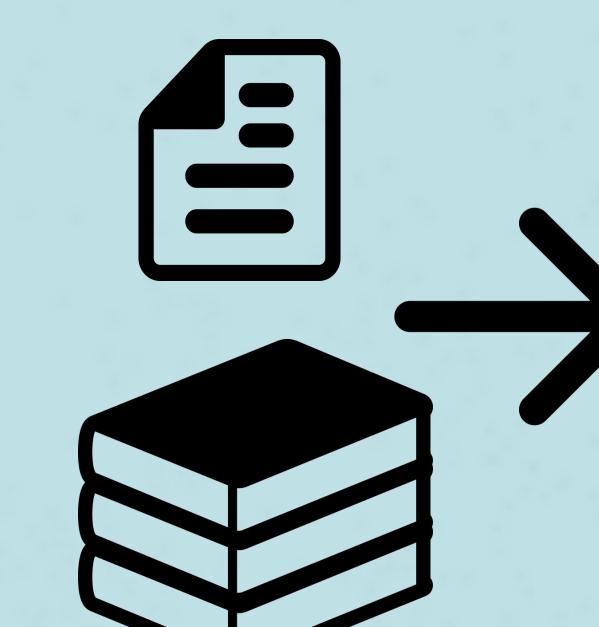

For each species in the filtered list, a separate API call is created. This includes: **base prompt + custom data fields + context chunks**
 EcoParse supports Ollama (local) or Gemini (cloud).
 With a little bit of experience, data from a 500 page PDF can be extracted in less than 5 minutes. Manual verification is still crucial for perfect results.

Funded by the European Union (ERC, BEAST, 101044740).
